A farther Account of Memorable

# EARTHQUAKES,

To the prefent Year 1756.

Wherein is inferted

A fhort and faithful Relation of the late Dreadful Calamity at LISBON.

### TOGETHER WITH

An Abstract of Father Goree's Narrative of the Rife of a new Island in the Bay of Santorini in the Archipelago, in the Year 1707.

#### BEING

A Continuation of a Tract entitled, A Chronological and Historical Account of the most memorable Earthquakes that have happened in the World, from the beginning of the Christian Period to the Year 1750.

To which is added, by way of APPENDIX,

A particular Account of an Auto de Fe, or Act of Faith, at Lifbon; taken from an Author of good Credit, who was himfelf an Eye-Witnefs thereof.

By a Gentleman of the University of Cambridge.

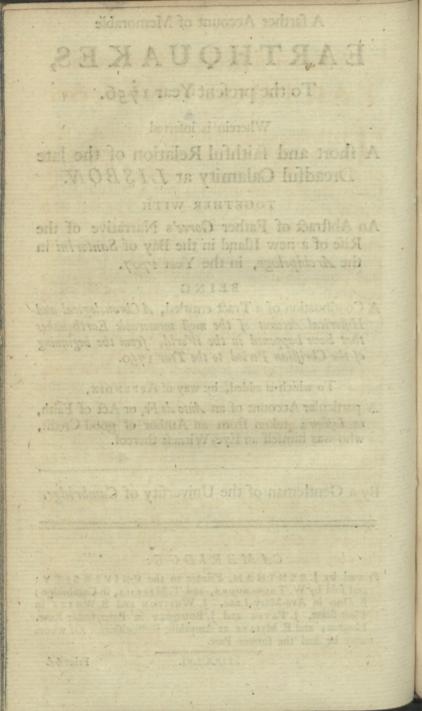

### CAMBRIDGE:

Printed by J. BENTHAM, Printer to the UNIVERSITY: and fold by W. THURLBOURN, and T. MERRILL, in Cambridge; B. DOD in Ave-Mary-Lane, J. WHISTON and B. WHITE in Fleet-fireet, J. PAYNE and J. BOUQUET in Pater-nosfer-Row, London; and E. MILLER at Ampthill, Bedfordfhire. Of whom may be had the former Part.

# A farther Account of Memorable EARTHQUAKES, &c.

HE following remarkable Earthquakes having efcaped my notice, on the publication of a former Tract on this Subject, I shall here, (observing the same method) give a faithful Relation of them in the order of Time. The first then that falls under our cognizance, is that of Antioch, mentioned by Matthew of Westminster to have happened in the Year of our Lord 110"; wherein that City, with many others in different parts of the World were almost totally demolished. And the fame Author speaks of another in 168, in which many Cities were deftroyed; and what is very extraordinary, this Earthquake was not only attended with great Floods in divers Provinces, but fwarms of Locusts likewife b. Some of the greatest however upon Record, were those of Conflantinople, which continued fucceffively for the fpace of four Months in the Year 441, and occafioned the People to chant their Litanies, with Proclus their Bishop, without the Walls of the City c.

Zonaras writeth<sup>d</sup>, that during the Reign of Anastatius, the Emperor of the East<sup>e</sup>, there happened fo great an Earthquake, that it overturned the very Foundations of many Buildings, not only in Constantinople, but in Bythinia and divers other places. And Stow takes notice of one in Lombardy, about the Year 1092, whose continuance was

2

forty Days; which overthrew many Houfes, and what was marvellous to behold, a Town was moved from its Seat to a confiderable diftance<sup>f</sup>.

Amongst many other extraordinary things, which fell out about the Year 764, the Author of Fasciculus Temporume, makes mention of an Earthquake, whereby feveral Cities, built on Mountainous places, were, upon the division of the Mountains, carried along with them into Vallies, more than fix Miles diftant. And Polydore Vergilh, in enumerating the Prodigies, fuppofed to be the forerunners of the Death of K. Henry I. inferts among them an Earthquake, which threw down many Houfes in the Year 1135, wherein the Earth feemed to fink under Mens Feet, and there was fuch a Sound, as Stow informs usi, was horrible to hear. The Chronicle of England likewife takes notice k, that the Stone Gate and Bulwark, which K. Henry III, caufed to be built by the Tower of London, were shaken down by an Earthquake in 1250, which after being rebuilt, were down again in the Year 12 ...

There was a terrible Earthquake in moft parts of the World, about the Year 1113<sup>1</sup>, in which Cities, Caftles, Villages with their Inhabitants were fwallowed up; Mountains were rent afunder; many Rivers dried up, and the Po in particular, one of the four greateft in Europe, was raifed in the form of an Arch, making a Way between the Earth and Water, through which People might pafs, infomuch that the approach of the laft Day

was

3

In

was apprehended. And the Author of the Fafciculus Temporum teftifieth<sup>1</sup>, that a great Mountain in the lower Burgundy, about the middle of the thirteenth Century, was divided and moved from its place many Miles; and after having overwhelmed five thousand Persons, was joyned to other Mountains in a wonderful manner.

The Earthquake of the Month of March 1185<sup>m</sup>, is fpoken of by our Historians as one of the most Terrible and Remarkable that ever happened in England, and such an one as was never known before. Many Houses were thrown down thereby, even such as were built of Stone, a thing not very common at that time, and the Cathedral Church at Lincoln was split from the Top to the Bottom.

Holinshed in his History of Ireland<sup>n</sup>, speaks of an Earthquake in that Kingdom in 1266; which as Sir James Ware observes<sup>o</sup>, was a very uncommon thing there, and always looked upon as a Prodigy. And great Earthquakes are faid to have happened in England<sup>p</sup>, on the Eve of St. Nicholas 1274, accompanied with Thunders, Lightnings and a Blazing Star, which made many a Man afraid. There was also a more general one about two Years after<sup>9</sup>, on the 11<sup>th</sup> of September, by the force whereof the Church of St. Michael at the Mount, without Glastenbury, fell to the Ground, and many famous Churches in England suffered more or less thereby.

4

In the Pontificate of Boniface (1302,) there were fuch confiderable Earthquakes, that Men were afraid to dwell in Cities, and the Pope himfelf took up his Lodging in a Meadow. And Stow makes mention of another happening in Italy and other Kingdoms, but more efpecially in the former, on 10th September, 1349; "where it was fo, violent, that in Rome it threw down many Houfes, and part of Caftles, Steeples, and Churches; and in Naples it threw down part of the Arch-Bifhop's Church, and many other stately Buildings of that City. It also overthrew many ftrong Towers, and goodly Monasteries. The City of Aquyla at this time was almost quite destroyed, by reason it overthrew many of the Churches, and chief Buildings, and did there more flaughter of People, than in any other Place; the Citizens and Strangers durft not ftay Day nor Night in their Lodgings or Houfes, but kept themfelves in the wide Market Places, or open Streets, during the Fury of this ftrange Earthquake; which continued full eight Days space, and was oftentimes so extreme, and terrible in diverse Places, that People were not able to ftand upon their Feet on plain Ground. It did fo much spoyle unto Churches, Castles, Towers, Monasteries, and other lofty Buildings; that the Ruins thereof in many Provinces are very fufficient Testimonies unto this Day.

The fame Author speaks also of a very great Earthquake in divers Kingdoms, but chiefly in Spain and Germany, in the beginning of October, seven Years after', where perished much People

\* Fascicul. Temp. Fol. LXXXIII, \* Stow's Chron. p. 247. 'Ib.

of

of all forts, many were flain in their Houfes, infomuch that fome of them feemed like Sepulchres. The City of *Bafil* was almost spoiled, and many other places were ruined.

That at Constantinople " (whereof divers worthy Authors have written, and particularly Munfter in his Geography) was fo ftrange and terrible for the fpace of eighteen Days conftantly, that with horrible fearfulnefs and damage it caft down to the Ground the Walls of the City, and all the Buildings towards the Sea Side, and overthrew all the Ditches. It did caft down the Tower where the Turk kept his Ammunition, with Five more. The Houfe of Tribute, which flood near unto the Wall, was overthrown, even to the Foundation into the Sea; the Leadings of the Waters, and Conduits, (which with incredible Expence had been made to lead the Waters of the Danube into the City) were for the most part broken and bruifed; and the Channel which is between Confantinople and Pera, was fo moved, that by great Surges, it caft the Water over the Walls of both the Cities : But the worft of all was, that more than 13000 Perfons remained dead on an heap. This great Earthquake happened in the Month of September, in the Year of Grace, 1 509, in the Reign of Bajazet, the fecond of that Name, and ninth Emperor of the Turks, who with all Diligence caufed the Walls of the City to be repaired."

Hall, in his Chronicle<sup>w</sup>, under the twentyfourth Year of the Reign of King Henry VIII. gives an account of a wonderous Earthquake,

" Travels of 4 Englishmer, & c.V. J. p.778. " Fol. excix.

which

6

which happened in Luxborne [Lifbon] in Portugal, on the 26<sup>th</sup> of January, 1533; wherein many Houfes and Towers were deftroyed, and many People flain by the Fall thereof. The King's Palace was fo fhaken, that both he and the Queen with her Ladies were obliged to flee out of it, without any Servants, and to feek for Succour where they might; when fuddenly the Quaking ceafed, the Rocks opened, and out fprang the Water, that the Ships in the Haven had like to have perifhed. Then the Earth quaked again, and did more Harm than before, and at Night it ceafed. Many Men were deftroyed in this Earthquake.

'In Tercera (one of the feven Iflands called the Affores) to hear the noife which the Rocks make when People go over them, as if they were going over a Cellar, a Man would think the Ifland was all hollow; and 'tis probable, the Air which is rarified in its Concavities, occafions the frequent Earthquakes, whereto it is fubject, as are most of the other Iflands. There happened fo great a one in this of Tercera, on the 24<sup>th</sup> of May, 1614, that it overturned in the City of Angra eleven Churches, and nine Chapels, besides private Houses: and in the City of Praya, it proved fo dreadful, that there was hardly a House left ftanding.\*

Mandalfo informs us <sup>y</sup>, that near Pannanuca in the Eaft-Indies, is a Mountain of Sulphur, which in the Year 1586 began to caft up Fire with fuch Violence, that at its first blazing thirty thousand Perfons perished thereby. And Kircher men-

\* Mandelfo's Travels, lib. iii. p. 274. Y Lib. II. p. 140.

tions z

tions<sup>2</sup> the terrible Havock made by an Eruption of Mount Ætna in 1669; in which one Village was fo entirely overthrown, that no Remains of it were left. Mr. Smith<sup>2</sup> fpeaks of a remarkable Efcape of an Acquaintance of his (from whom he had the Relation) in the Earthquake at Port-Royal in Jamaica in 1692, who after being fwallowed up in one Place, was thrown out at another. And it has been alfo confidently afferted<sup>b</sup> (but with what Truth I cannot pretend to fay) that fome other of the Inhabitants who were fwallowed up there, were thrown out alive, at four Miles diftance.

The celebrated *Baglivi* (Phyfician I think toPope Innocent XII. to whom he dedicates his Works) gives a long and remarkable account of the Earthquake that happened at *Rome* on the 2<sup>d</sup> of *February*, 1703 °; (of the Diftreffes of which Place he himfelf was an Eye-witnefs) wherein he afferts, that two hundred Cities and Villages in the Kingdom of *Naples*, in the Pope's Territories and other parts of *Italy*, were demolifhed and rendered uninhabitable, with the lofs of 14000 Lives.

But the most remarkable Thing that has happened within the compass of many Centuries, was the Rife of an Island out of the Sea near Santorini in the Archipelago, of which Mr. Salmon has given the following Abstract.<sup>d</sup> — " The Vulcano,

<sup>2</sup> Mund. Subter. Tom. I. p. 205. <sup>a</sup> Nat. Hift. of Nevis, Lett. 2. <sup>b</sup> Apology for T. C. P. Vol. III. p. 136. <sup>c</sup> Hift, Romani Terræ Mot. Opera, 4to, p. 514,529, &c.

<sup>d</sup> The Title of the Tract from whence this Abstract is taken, is, A Relation of a new Island, which was raifed from the Bottom of the Sea on the 13th of March, 1707, in the Bay of Santorini in the Archipelago. Written by Father Goree, a Jesuit, and Eye-Witness. — Phil. Wranf. Vol. XXVII. Numb. 332. p. 354, Sc. Salmon's Modern History. Folio Edit. Vol. I. p. 580.

which made this Ifland, was preceeded by violent Shakings of the Earth, followed by a thick Smoke, which arofe out of the Sea in the Day-time, and Flames of Fire in the Night, accompanied with a terrible roaring Noife under-ground, not unlike that of Thunder, and the roaring of great Guns. Father Goree, who was at Santorini at the Time that this laft Island was formed, and kept a Diary of the Progress of it for a Year and upwards, relates, that it did not always rife equally on every Side; but it often happened, that while it grew in Length and Breadth on the one fide, it funk down and decreafed on the other; that he faw a Rock rife out of the Sea, forty or fifty Paces from the Ifland, which he continued to observe four Days together, at the End of which Time it funk again into the Sea, and did not appear any more; but others, which disappeared as this did, appeared again fome time after. That the Sea in the Gulph or Harbour of Santorini feveral times changed Colour: At first it was green, then reddifh, and afterwards of a yellowith Colour; from whence there arofe a Stench, which fpread itfelf over the Ifland, and they imagined proceeded from the Sulphur, with which the Sea was covered. They faw also great Rocks rife up on every fide, which were afterwards united to the first, and made but one Island. As the Smoke increased very much, and there was no Wind ftirring, it afcended to the middle Region of the Air, fo as to be feen three or fourfcore Miles diftant; and in the Night-time it appeared like a Flame of Fire; while this continued, there was an intolerable ftench for a Day and a half; but then a ftrong South-

9

South-Weft Wind arifing, which carried the Smoke upon the Ifland of Santorini ; it deftroyed all their Vintage, their Grapes appearing like dried Raifins; their Silver and Copper alfo were tarnifhed, and looked black, and the Natives became afflicted with Pains in the Head. In fome Places the Sea boiled and bubbled up, and the Fish were found dead upon the Shores. Noifes were heard under-ground like the firing of Cannons, and Flames of Fire darted up high into the Air, and then difappeared. Our Author numbered, one Night, fixty Openings, or Funnels, which all of them threw out a very bright Fire; and the next Morning he observed, that the Island was very much raifed. At fome times were heard Claps like Thunder, and great Stones were thrown up into the Air, endangering the Buildings, and People on Shore, and the Veffels paffing by. The 15th of April 1708, was remarkable above all other Days for the great Number and Violence of Claps; by one of which near an hundred great Stones were thrown up at once into the Air, fome of them falling into the Sea at two Miles diftance. These terrible Noises and convulsive Motions being much decreafed in May 1708, upwards of a Year after the Appearance of the first Island: Father Goree, with the Latin Bishop of Santorini, had the Curiofity to go in a Boat to view it; but in their Paffage thither, the Sea fmoking, they put their Hands into the Water, and found it fo very hot, that they were glad to make hafte back, when they were within five hundred Paces of the new Ifland. They went afterwards to the greater Kammeni, to view the burning Island from thence, + B and

and they judged it to be about two hundred Feet in height, of an oblong Form, about a Mile broad, and five or fix Miles in Circumference. This Father left the Ifland the 15th of August 1608, when the Fire, Smoke and Noife, continued very moderate, as he understood they did till the Year 1611, by Advice from thence; but the Natives were then in no Apprehenfions of Danger; the Island however was still increasing in Magnitude. Not only this new Ifland e, but the others near it, and even Santorini itself, are thought to have rifen, out of the Sea. "

Mr. Peter Le Neve <sup>f</sup>, (formerly Norroy King at Arms, and Fellow of the Royal Society) fent a remarkable Account to that Society, July the 23d, 1717, of the finking of three Oaks into the Ground, at Mannington in the County of Norfolk, in the Day-time, to the great Aftonishment of the Beholders. And Mr. Edmund Barrels, Rector of Sutton, near Dartford in Kent, informed Sir Hans Sloane, by Letter dated August 11, 1727, of an Earthquake in that Neighbourhood, in which a Piece of Ground in a Meadow, in the Parish of Farmingham, fell in, fo as to leave a Pit about eight or ten Feet over, and near as deep; which being on the fame Level with the River, was full of Water when first discovered.

e Megali Kammeni, or the great burnt Island raifed out of the Sea after an Earthquake, 196 Years before the Birth of our Saviour. The fecond or White Island, mentioned by Pliny, arole out of the Sea in his Time, in the Reign of Vefpafian. The third, called Mikri Kammeni, in the Year 1573. Salmon, ibid. f Phil. Tranf. Vol. xxx. No. 355. p. 766.

g Ibid. Vol. xxxiv. Nº. 399. p. 305.

There

In the London Gazette of the Year 1754, were published the following Accounts of a terrible Earthquake at Constantinople.

Sept. 16. On the fecond Inftant, about ten o' Clock at Night, we had a violent shock of an Earthquake, which lasted about a Minute; though, in other Parts, it was thought longer. Its direction was from the East : the Night was calm, and clear Moon-Light. It has done confiderable Damage. The famous Mofche of Sultan Mahomet, (the first built in this City on the Conqueft) has loft feveral of its Cupolas. Seven Minarets or Steeples were thrown down, by which other Mosches and Houses have fuffered. Two of the feven Towers, with fome of the Wall, are greatly damaged; as are all the Turrets, and many parts of the Wall of the City. One great Khan is totally deftroyed, and another rent and hurt; the Walls of the Prifon of Galata fell in; feveral of the weaker Houfes, interfperfed in the City, are demolifhed; and it is faid many Perfons loft their Lives. At twelve that Night, and at two in the Morning, the Shock was repeated altho' lefs violent; and, to the 14th, at Three in the Morning, there have been daily feveral very fenfible ones, and we cannot fay we are yet clear of them. It is reported that fome Villages in Afia have been deftroyed; and that Nicodemia has greatly fuffered. About the Time of the Earthquake, on the 14th in the Morning, a Fire happened near the Sultan's Palace at Befigdash, which he inhabits, and confumed a large Seraglio belonging to Piryzade.

Sept. 18. On the 16th Inftant, the Grand Signior, attended by the Grand Vizir and the B 2 principal

12

principal Officers of the Port, quitted this City and retired to one of his Houfes on the Edge of the great Canal. It is already computed, that the Number of Inhabitants which have perifh'd in the late Earthquakes, amounts to near 3000; many have been dug out of the Ruins of the Houfes, and many more could not be reliev'd. Above three-fourths of the Houfes are empty, by the Flight of the Inhabitants. Yesterday we had another Shock, but not fo violent.

By later Accounts of the faid Earthquake it appears, that for an Hour the Heavens were in a continual Blaze, the Flashes of Lightening fucceeding one another momentarily, whilft the Thunder was inceffant, during the time of the great Shock, which threw down the Buildings, and buried fo many in the Ruins."

But of all the Calamities above related, none feems to have been more dreadful, nor more nearly to affect this Nation, than that which befell the City of Libon \* in November laft; the whole of which opulent Place was then deftroyed by an Earthquake and Conflagration; wherein its immense Treasures, with at least a fourth part of its Inhabitants are fuppofed to be buried in its Ruins, whilft the Survivors are left in fuch deplorable Circumftances as must excite the Pity of every one, who has any Bowels of Compassion. But

\* One of the greatest trading Cities in Europe, and wherein the English had established the most confiderable Factory. The number of its Houfes was computed at 30000, and of its Inhabitants a 200000. Its Churches were about 120, and there were more Cont vents than in any other place, of the fame extent. when outhous or eight of their

hear

hear the relation from his Majefty's Envoy Extraordinary to the King of *Portugal*, *Abraham Caftres*, Efq; an Eye-witnefs thereof, in a Letter to the Secretary of State, dated from *Lifbon*, *Nov*. 6. 1755.

### SIR,

"You will in all likelihood have heard before this, of the inexpreffible Calamity befallen the whole Maritime Coaft, and in particular this opulent City, now reduced to a heap of Rubbish and Ruin, by a most tremendous Earthquake on the first of this Month, followed by a Conflagration, which has done ten times more Mifchief, than the Earthquake itself. I gave a fhort account of our Misfortune to Sir Benjamin Keene, by a Spaniard, who promifed, as all intercourfe by Poft was at a fland, to carry my Letter as far as Badajoz, and fee it fafe put into the Poft Houfe. It was merely to acquaint His Excellency, that God be praifed, my Houfe flood out the Shocks, though greatly damaged, and that happening to be out of the reach of the Flames, feveral of my Friends burnt out of their Houses, had taken refuge with me, where I have accommodated them as well as I could, under Tents in my large Garden ; no Body but Lord Charles Dowglass, who is actually on board the Packet, belides my Chaplain and myself having dared hitherto to fleep in my Houfe, fince the Day of our Difaster. The Conful and his Family have been faved, and are all well, in a Country Houfe near this City. Those with Me at prefent, are the Dutch Minister, His Lady, and their three Children, with feven or eight of their Servants.

Servants. The reft of my Company of the better Sort confifts of feveral Merchants of this Factory, who, for the most part have lost all they had, though fome indeed, as Meff. Parry and Mellifb's House, and Mr. Raymond, and Burrell, have had the good Fortune to fave their Cafh, either in whole or in part. The number of the Dead and Wounded I can give no certain Account of as yet, in that refpect our Poor Factory has escaped pretty well, confidering the number of Houfes we have here. I have loft my Good and Worthy Friend the Spanifs Ambaffador, who was crushed under the Door, as he attempted to make his Efcape into the Street. This with the Anguish I have been in for these five Days past, occasioned by the difmal Accounts brought to us every inftant, of the Accidents befallen to one or other of our Acquaintance among the Nobility, who for the most part are quite Undone, has greatly affected Me; but in particular the miferable Objects among the lower fort of His Majefty's Subjects, who fly alfo to Me for Bread, and lie fcattered up and down in my Garden, with their Wives and Children. I have helped Them all hitherto, and shall continue to do fo, as long as Provisions do not fail Us. which I hope will not be the Cafe, by the good Orders which M. de Carvalho has iffued in that respect. One of our great Misfortunes is, that we have neither an English or Dutch Man of War in the Harbour. Some of their Carpenters and Sailors would have been of great use to Me on this occafion, in helping to prop up my Houfe; for as the Weather which has hitherto been remarkably fair, feems to threaten us with heavy Rains, it will be impoflible

14

impoffible for the Refugees in my Garden, to hold out much longer; and how to find Rooms in my Houfe for them all I am at a lofs devife; the Floors of most of them shaking under our Feet ; and must confequently be too weak to bear any fresh number of Inhabitants. The Roads for the first Days having been impracticable, it was but yesterday I had the Honour in Company with M. de la Calmette, of waiting on the King of Portugal, and all the Royal Family at " Belem, whom we found encamped ; none of the Royal Palace being fit to harbour Them. Though the loss His Most Faithful Majesty has sustained on this ocafion is immenfe, and that His Capital-City is utterly Deftroyed; He received us with more Serenity, than we expected, and among other things told us, that He owed Thanks to Providence for faving His and His Familys Lives : and that He was extremely glad to fee us both fafe. The Queen in her own Name, and all the young Princeffes, fent us word, that they were obliged to us for our attention; but that being under their Tents, and in a Drefs not fit to appear in, They defired that for the prefent, we would excuse their admitting our Compliments in Person. Most of the confiderable Families in our Factory, have already fecured to themfelves a paffage to England, by three or four of our London Traders, that are preparing for their departure. As foon as the fatigue and great trouble of Mind I have en-

a Belem a little Town about a Mile from Lifbon, on the Banks of the Taio, where the Kings and Queens of Portugal are buried ; their Maufoleums are within the Church of the Hieranomites, which is all lined with white Marble. Moll's Geography, Edit. 1701, p. 327.

dured

dured for these first Days are a little over, I shall be confidering of fome proper method for fheltering the poorer Sort, either by hiring a Portuguese Hulk, or if that is not to be had, fome English Veffel till they can be fent to England; and there are many who defire to remain, in hopes of finding among the Ruins, fome of the little Cafh they may have loft in their Habitations. The beft orders have been given for preventing Rapine, and Murders, frequent inftances of which 'we have had within these three Days, there being swarms of Spanish Deferters in Town, who take hold of this opportunity of doing their bufinefs. As I have large fums deposited in my House, belonging to fuch of my Countrymen as have been happy enough to fave fome of their Cafh, and that my Houfe was furrounded all last Night with Ruffians; I have wrote this Morning to M. de Carvalho, to defire a Guard, which I hope will not be refused. - We are to have in a Day or two a Meeting of our fcattered Factory at my Houfe, to confider of what is beft to be done in our prefent wretched Circumftances. I am determined to flay within call of the Diftreffed, as long as I can remain on Shore with the leaft Appearance of Security: And the fame Mr. Hay (the Conful) feemed refolved to do, the last time I conferred with him about it .- I most humbly beg your Pardon, Sir, for the Diforder of this Letter, furrounded as I am

a At Port Royal the very Night the Earthquake happened in that place, there were *Ruffians*, who endeavoured to rifle their Neighbours, and the Houfes fell upon fome of them in the attempt. The fame would have happened at *Lima* and *Calag*, had not the Viceroy fet up Gibbets in those places in Terrorem. Chronological and Hiltorical Account of Earthquakes. p. 42.

bv

17

by many in Diftrefs, who from one inftant to the other are applying to me either for Advice or Shelter. The Packet has been detained at the Defire of the Factory, 'till another appears from England, or fome Man of War drops in here from the Streights. This will go by the first of feveral of our Merchant Ships bound to England. I must not forget to acquaint you, that Sir Harry Frankland \* and Lady are fafe and well, and have the Honour to be, &c."

# In a Letter from Belem of the 7th, we have the following Particulars.

" The prefent Scene of Misery and Diftress is not to be defcribed; the Kingdom of Portugal is ruined and undone, and Lifbon, one of the fineft Cities that ever was feen, is now no more. - The Escape of the forementioned Gentleman\* is one of the most providential Things that ever was heard of; for whilft he was riding about the middle of the City in his Chaife, on the first instant, he obferved the Driver to look behind him, and immediately to make the Mules gallop as fast as pof-fible, but both he and they were very foon killed and buried in the Ruins of a Houfe which fell on them; whereupon Sir Henry jump'd out of the Chaife, and ran into a House that instantly fell alfo to the Ground, and buried him in its Ruins for a confiderable Time; but it pleafed God that he got out alive, and not much bruifed. - His Lady likewife was providentially in the Garden when their Houfe fell, and fo efcaped. About half an Hour after the first Shock, the City was on fire in five different Parts, and has been burning ever + C fince,

fince, fo that the English Merchants here are entirely ruined. There have been three Shocks every Day fince the first, but none fo violent as the first. - The King has ordered all the Soldiers to affift in burying the Dead, to prevent a Plague; and indeed upon that Account the Fire was of Service in confuming the Carcaffes both of Men and Beafts. The English have miraculously escaped, for notwithstanding the Factory was fo numerous, not more than a Dozen are known to have been killed; amongft whom was poor Mrs. Hake, Sifter to Governor Hardy of New York, who fuffered as the was driving her Children before her; and the Spanish Ambassador was killed alfo, with his young Child in his Arms. - Every Perfon, from the King to the Beggar, are at prefent obliged to lay in the Fields, and fome are apprehensive that a Famine may enfue."-

### An Extract of a Letter from on board a Ship in Lifbon Harbour, Nov. 19, to the fame Purport.

"Mine will not bring you the firft News of the most dreadful Calamity befallen this City and whole Kingdom. — On Saturday the first instant, about half an Hour past nine o'Clock, I was retired to my Room after Breakfast, when I perceived the House began to shake, but did not apprehend the Cause; however, as I shaw the Neighbours about me all running down Stairs, I also made the best of my Way; and by the time I had cross'd the Street, and got under the Piazzas of some low Houses, it was darker than the darkest Night I ever was out in, and continued so for about a Minute, occasioned by the Clouds of Dust from the falling

18

IG

falling of Houfes on all fides. After it cleared up, I ran into a large Square adjoining ; but being foon alarmed with a Cry, that the Sea was coming in, all the People crowded foreward to run to the Hills, I among the reft, with Mr. Wood and Family. We went near two Miles thro' the Streets, climbing over the Ruins of Churches, Houfes, Gc. and stepping over hundreds of dead and dying People, Carriages, Chaifes and Mules, lying all crushed to Pieces; and that Day being a great Feftival in their Churches, and happening juft at the time of celebrating the first Mass, thousands were affembled in the Churches, the major part of whom were killed ; for the great Buildings, particularly those which flood on any Eminence fuffered the most Damage. Very few of the Churches or Convents have escaped. We staid near two Hours in an open Campo; and a difmal Scene it was, the People howling and crying, and the Sacrament going about to dying Perfons: fo I advifed as the beit, to return to the Square near our own Houfe, and there wait the Event, which we did immediately, but by the Time we got there, the City was in Flames in feveral diftant Parts, being fet on fire by fome Villains, who confeffed it before Execution. - This completed the Deftruc-, tion of the greatest Part of the City; for in the Terror all Perfons were, no Attempt was made to ftop it; and the Wind was very high, fo that it was communicated from one Street to another by the Flakes of Fire drove by the Winds. It raged with great Violence for eight Days, and this in the principal and most thronged Parts of the City; People being fled into the Fields half naked, the Fire

C 2

Fire confumed all forts of Merchandife, Houfhold Goods, and Wearing Apparel, fo that hardly any thing is left to cover People, and they live in Tents in the Fields. — If the Fire had not happened, People would have recovered their Effects out of the Ruins; but this has made fuch a Scene of Defolation and Mifery as Words cannot defcribe.

The King's Palace in the City is totally deftroyed, with all the Jewels, Furniture, &c. The India Warehoufes adjoining, full of rich Goods, are all confumed. The Cuftom-houfe, piled up with Bales upon Bales, is all deftroyed; and the Tobacco and other Warehoufes, with the Cargoes of three Brazil Fleets, fhared the fame Fate. In fhort, there are few Goods left in the whole City."

### From another Letter of the fame Date.

"On Saturday the first instant, I arose at Five, in order to remove my Ship from the Cuftom-house, agreeable to my Order; by Nine we failed down and anchored off the upper end of the Terceras, Wind at N.E. a finall Breeze, and a fine clear Morning, Ten Minutes before Ten, I felt the Ship have an uncommon Motion, and could not help thinking fhe was a-ground, although fure of the Depth of Water. As the Motion increased, my Amazement increased also; and as I was looking round to find out the Meaning of this uncommon Motion, I was immediately acquainted with the direful Caufe; when at that Inftant looking towards the City, I heheld the tall and stately Buildings tumbling down, with great Cracks and Noife, and particularly that Part of the City from St. Paul's in a direct Line to Bairroalto; as alfo, at the fame Time, that Part ethodad a

Part from the faid Church along the River-fide Eaftward as far as the Gallows, and fo in a curve Line Northward again; and the Buildings as far as St. Yoze and the Rofcio, were laid in the three following Shocks, which were fo violent, as I heard many fay, they could with great Difficulty ftand on their Legs. There is fcarce one Houfe of this great City left habitable. The Earth opened, and rent in feveral Places, and many expected to to be fwallowed up. - As it happened at a Time when the Kitchens were furnished with Fires, they communicated their Heat to the Timber with which their Houfes were built or adorned, and in which the Natives are very curious and expensive, both in Furniture and Cielings; and by this means the City was in a Blaze in different Parts at once. The Conflagration lafted a whole Week. --- What chiefly contributed to the Deftruction of the City, was the Narrowness of the Streets. It is not to be expressed by Human Tongue, how dreadful and how awful it was to enter the City after the Fire was abated : when looking upwards one was ftruck with Terror at beholding frightful Pyramids of ruined Fronts, fome inclining one Way, fome another; then on the other hand with Horror, in viewing Heaps of Bodies crushed to Death, halfburied and half-burnt; and if one went through the broad Places or Squares, there was nothing to be met with but People bewailing their Misfortunes, wringing their Hands, and crying, The World is at an End; whilst others meeting with those they had Concerns with, were embracing and begging Forgiveness of Injuries past. In short, it was the most lamentable Scene that Eyes could behold.

21 "

22

behold. As the Shocks, though fmall, are frequent, the People keep building Wooden Houfes in the Fields; but the King has ordered no Houfes to be built to the Eaftward of *Alcantara* Gate. — Juft now four *Englifb* Sailors have been condemned for ftealing Goods, and hiding them in the Ballaft, with Intent to make a Property of them."

The City of Setuval, in the Neighbourhood of Lifbon, was entirely fwallowed up, that of Coimbra fuffered greatly, as indeed did the whole Kingdom of Portugal; and by the Accounts from Madrid, Seville, Cadiz, &cc. that of Spain did not efcape without great Mifchief; fome of which is particularly fpecified in the following

### Extract of a private Letter from a Gentleman at Gibraltar, dated Nov. 7.

"The first instant, about ten Minutes after Ten in the Forenoon, we were greatly alarmed by an Earthquake. The Morning was clear, and but little Wind at South-Weft. It began with a Trembling, which lasted about half a Minute, then a violent Shock was felt, and after that a Trembling for five or fix Seconds, which was fucceeded by another Shock not fo violent as the first, that went off gradually as it began. It lafted in the whole very near two Minutes. The Guns on the Batteries were feen fome to rife, others to fink, the Earth having an undulating Motion. Several Things were thrown off of Shelves, and the Houfes were deferted. Most people were feized with Giddiness and Sicknefs, and fome fell down, others were ftupified, and in general all were affected as if electrified, though many that were walking or riding

riding felt no Motion, but were fick. I was in Captain Leitb's Parlour, and the Walls moved in fuch a manner that we ran out, thinking the Houfe was falling. Thank God however it did no Mifchief here, only the Gable-ends of two Houses are rent. The Sea role fix Feet eight Inches every fifteen Minutes, and fell fo low that Boats and all the finall Craft near the Shore were left aground, as were Numbers of fmall Fifh. This Flux and Reflux lafted till next Morning, having decreafed gradually from Two in the Afternoon. The Thermometer was at 62, and no Alteration was observed. At St. Roque it was so violent as to throw Perfons out of their Seats, and the Arch of the Church is rent. At Algazaist feveral Walls fell down, and great Part of the Town was overflowed. At Arzilla in Barbary, the Water role nine Feet, and a Settee of the Town foundered. At Malaga, the Tops of fome high Buildings fell; but by all Accounts, it has done great Mifchief at Cadiz, where their great Caufeway is torn up. The Ships in our Bay, and all about us, thought they had ftruck on Rocks, and the Dutch Fleet off Cape St. Mary's fired Guns, as in Diftrefs."

Another from a Gentleman of the fame Place to his Friend in Dublin, dated Nov. 29, contains a particular Account of the Effects of the Earthquakes in Africa.

"In the Part of Barbary near this Place they have fuffered as much, if not more than in Portugal; and they write from Tetuan, that the Earthquake began at the fame Hour it did here, and continued feven or eight Minutes; during which Time

Time they had three violent Shocks, and expected every Moment the City would fall to the Ground; but they did no farther Damage than the Opening of feveral Walls, and it was obferved that the River of that Place appeared as red as Blood.

At Tangier it began at the fame Hour, fhaking the Ground, Walls, Houfes and Mofques, in a very terrible Manner, and a great Pile of antient Building near the Gate of the Town, after two or three Movements, tumbled down, and killed feveral People; the Water rofe 50 Feet perpendicular, and flowed over the Town Walls (a Thing never feen before) leaving behind it, at its Return, a vaft Quantity of Fish and Sand; and in like manner it continued to rife and fall about 18 times in the fpace of eight Hours.

At Sallee it did vaft Damage, Numbers of Houfes having tumbled down; and the Sea flowed into the Heart of the City, and drowned feveral of the Inhabitants. There were feveral Boats full of People fifthing at the fame Time, who were all fwallowed up and never feen afterwards; and alfo a Number of People and Camels just fetting out for Morocco, perifhed in the fame Manner.

At Fez a vaft Number of People were killed, and the greateft Part of that large City deftroyed; and at fome Diftance from it a prodigious large Mountain opened in the Middle, out of which iffued a River as red as Blood.

At Morocco a vaft Number of Houfes were deftroyed, and a great many People buried in the Ruins. Without this City there was a Place which contain'd about 400 Huts, or little Shops, the People of which were

24

were called the Children of *Befumba*, and 'tis faid they amounted at leaft to 10000 Souls; who with a large number of Horfes, Camels, and other Cattle, were entirely fwallowed up by the Earth, which immediately after clofed, and not one Soul efcaped.

Thefe were the first Advices we had from Barbary, which you may depend upon to be genuine, having had them from undoubted Authority: But they write from Tetuan of the 24<sup>th</sup> instant, that there had arrived that Day an Express from Fez, which brought an Account of another Earthquake, which began on the 18<sup>th</sup> at Night, and continued 'till the 19<sup>th</sup> in the Morning, infinitely more violent and terrible than the former; innumerable Houses fell to the Ground, and Numbers of People were destroyed in the Ruins.

At Mequinez it was much more dreadful, fcarcely leaving a fingle House standing; and that Part of the City where the Jews refided was entirely fwallowed up, and all the People of that Sect, (about 4000 in Number) perished, except seven or eight. They alfo felt this Shock at Tangier, at which Place the Wells and Fountains became dry, and continued fo twenty-four Hours. We have no farther Accounts as yet from Barbary, tho' it is faid greater Damage has been done in the Heart of the Country, where whole Provinces have been fwallowed up. God preferve us from fuch dreadful Cataftrophes, and comfort our Friends who have fuffered in them! We have had feveral Repetitions in this Garrison, which, thank God, have produced no bad Confequences; however, we continue under the greateft Terror and Apprehenfions, having fuch dreadful Prospects about us."

501

The fame Day that the first Earthquake happened at Lisbon, a very extraordinary Phænomenon alarmed feveral Sea Port Towns in England, and Ireland, and many Cities in Holland. The Waters in the feveral Rivers, Canals, Lakes, &c. being agitated in fuch a manner, that Buoys were broken from their Chains, large Veffels fnapped their Cables, and fmaller ones were thrown out of the Water on the Land. In the Lake of Harlem particularly, the courfe of a Veffel on full Sail was fuddenly fufpended; and the Rudder unhung. During the time of this Agitation, which continued near four Minutes, not only the Waters in Rivers and Lakes, but also all manner of Fluids in Coolers, Tubs, &c. dashed over the Sides notwithftanding there was no Motion perceptible in their containing Veffels. This agitation of Water we are informed, extended beyond Utrecht, and alfo Southward of Brabant.

The above Accounts correspond with those from Portfmouth, fome parts of Wiltshire, and Surry. At Godalmin the agitation of a Canal in a Gentleman's Garden was fingular; it fuddenly role fo high, as to overflow the Bank on one fide, then subfided, and immediately overflowed the Bank on the other. At Tenterden in Kent, Framlingbam in Suffolk and other places, the Waters of feveral Ponds were forced up the Banks with great Violence. At Swanfey in the Evening, after two hours Ebb, a large head of Water rufhed up the River with great noife, floated two large Veffels, broke their Stern Moorings, and hove them acrofs the River, and 'twas with great difficulty they were prevented from over-fetting. At Kinfale in Ireland.

27

Ireland, the Tide having ebbed for fome time, fuddenly returned with a Violence and impetuolity impoffible to be defcribed. By fpecial Providence the Boats were juft returned from Sea, with the Sailors on board, or they would have been dafhed in pieces one against another. These fudden and furprising fluxes, and refluxes of the Sea, continued from three in the Afternoon, till ten at Night. Seldom more than a quarter of an Hour before each return, to the infinite amazement and terror of the Inhabitants. Some shocks of an Earthquake were felt the fame Day at Cork, and probably this furprising Phænomenon might proceed from the Eruption made in the Sea.

# Madrid, Nov. 28. 1755.

<sup>e</sup> Letters from the Southern Coafts of this Kingdom advife, that the fhock of an Earthquake was felt the fifth Inftant, which produced a very fingular effect at *Seville*, where the Tower of the Metropolitan Church, which by the former flocks was fo bent that it feemed ready to fall, was fet upright again. <sup>a</sup>

On the 18tb of November, they had a violent fhock of an Earthquake at Boston in New-England, which lasted two or three Minutes; but the damage happened to be no more than shattering a few Houses, and throwing down abundance of Chimneys: with a violent agitation of the Water; which in the Harbour rose about 20 Feet.

Monacho [in Italy] and that Neighbourhood have also fuffered, and the whole frame of the Earth is still in Motion.

<sup>a</sup> See an account of an incident of the like kind at Meffina in Sicily in the Year 1693, from Mr. Chifbull's Travels. Chronological and Historical Account of Earthquakes. p.30.

From

From Bern we learn, that on the ninth of December, a pretty violent thock of an Earthquake, which lafted about a Minute was felt at that place, and in many parts of Switzerland about the fame time, which put the People into great confternation, without any other damage.

On December 10, a very violent Shock was felt at Scaffbausen, Basil, and in that Neighbourhood.

The Letters from Swabia, Franconia and the Electorate of Bavaria, are filled with melancholy accounts of the damage done by the late Earthquakes. And at *Thionville* in the Dutchy of Luxemburgh, the Barracks were thrown down, and above 500 of the Garrifon buried in the Ruins.

By the accounts hitherto received, this extraordinary Earthquake has continued for the fpace of two Months, and been felt with more or lefs violence, from the Eaftern fhores of *America* to the Heart of *Germany*, and from the frozen Clime of *Iceland*, to almost the Tropic of *Cancer*, about 4000 Miles one way, and 2000 the other : fo that confidering its Duration, Extent and mischievous Effects, it feems to be one of the greatest Calamities that has befallen the World in almost any Age; and design'd by Providence to rouse wicked Nations from that Lethargy of Sin and Senfuality they are almost universally fallen into, and to bring them to a due Senfe of their Dependance thereupon.

The Reverend Mr. Horton, Chaplain to the English Factory at Leghorn in Italy in 1744, when a very great Earthquake happened in that City; concludes the Pamphlet he wrote on that Occasion, in the following words. "The Senfe

of

28

of fo great a deliverance (for God in the midft of Judgement remembered mercy) produced an uncommon refolution in the Magistrates and People of Leghorn, to observe a Solemn Fast for ever on the day it happened; prohibiting any Publick, or Private Balls, Masquerades, or other Diversions of the Carnival for that day, with an humble application to His Royal Highness the Grand Duke of Tuscany, that Masquerades at the Theatre, might wholly be abolished."

This request was approved and confirmed by an order from the Council of Regency in Florence. A glorious example indeed, and highly worthy the imitation of all other Nations! who although not fuch immediate fufferers as were the Inhabitants of this City, nor have ever felt fuch dire Calamities as lately befell those of Lisbon; yet ought they to take warning thereby; and even the most distant view should engage them to reform, repent and turn away from their Iniquities; left by their manifold tranfgreffions they fhould provoke the Lord to whet his fword and cut them off in like manner. This would be more becoming all wife and confiderate Perfons, than to be curious in their Enquiries, into the Causes of the Fate of other Men; or to offer their Confiructions of them to the World : In which Men are but too apt to overlook the main Ends of Providence in fuch Vifitations, which are generally intended for the benefit of the Survivors, That when the Judgments of the Lord, are in the Earth, They might learn Righteoufnefs. Ifaiah xxvi. 9.

Our Bleffed Saviour has fufficiently cautioned us against rash Judging, in his Interpretation of the

29

two

# 30 An Historical Account, Sc.

two Cafes, of those whose Blood Pilate mingled with their Sacrifices; and of the eighteen Persons upon whom the Tower of Siloam fell. Luke. xiii. 1, 2, 3, 4.

There have been indeed fome Inflances both ancient and modern, where God's Judgements have carried but too legible a Mark of the Crimes for which they fuffered; but from these we must not pretend to form any general Conclusion.

There are Examples likewife in Holy Writ, where the beft of Men have been the most eminent Sufferers; among which we may reckon Holy Job, many of the Prophets, and those Worthies whose Faith is so eminently diftinguished in the 11th Chapter of the Epistle to the Hebrews.

Nor have we the leaft reafon, from the terrible Difafters heretofore related, to conclude that the Places where they happen'd were more wicked than others; or that thofe who loft their Lives in the late fatal Overthrow of *Lisbon*, were more corrupt and vicious than many of thofe that furvived them; fince 'tis probable moft of the poor Prifoners in the \* Inquifition, were involved in the almost general Destruction, and by that means delivered from the much greater Evils intended for them: whilft the *Inquifitors* themfelves, (Members of the most unmerciful Tribunal ever crected in the World, as the following Relation manifests) efcaped with Impunity.

\* There are Letters from Lisbon which fay, the first Building that fell by the Earthquakes was the Court of the Inquisition-Office.

# APPENDIX.

An Abstract of Dr. Geddes's Account of an Auto de Fe, (or Act of Faith) of which he himself was an Eye-Witness.

\* W HEN a competent Number of Prifoners are convicted of Herefy, either by their own voluntary or extorted Confeffion, or upon the Evidence of certain Witneffes; a Day is fixed by the chief Inquifitor for a Goal-Delivery, which is called by them an Ast of the Faith, and which is always upon a Sunday. In the Morning of that Day, the Prifoners are all brought into a great Hall, where they have the Habits put on they are to wear in the Proceffion, which begins to come out of the Inquifition about nine of the Clock in the Morning.

The first in the Procession are the Dominican Friars, who carry the Standard of the Inquisition, which on the one fide hath their Founder Dominic's Picture, and on the other fide a Cross betwixt an Olive-Tree and a Sword, with this Motto, Justitia et Misericordia.

After the Dominicans, come the Penitents, fome with Benitoes, and fome without, according to the Nature of their Crimes; they are all in black Coats, without Sleeves, and bare-footed, with a Wax Candle in their Hands. Next come the Penitents who have narrowly escaped being burnt, and who over their black Coats have Flames painted,

\* See Salmon's Modern Hift. 3d Edit. Fol. Vol. II. p. 813. from Dr. Geddes's Mifcellaneous Tracts, Vol. I. with their Points turned downward, to fignify their having been faved, but fo as by Fire.

Next come the Negative and Relapfed that are to be burnt, with Flames upon their Habit pointing upwards: And after them those who profess Doctrines contrary to the Faith of the Roman Church; who besides Flames on their Habit pointing upwards, have their Pictures (which are drawn two or three Days before) upon their Breasts, with Dogs, Serpents and Devils, all with open Mouths, painted about them.

Pegna, a famous Spanifb Inquifitor calls this Procettion, Horrendum ac tremendum Spectaculum; and fo it is in truth, there being fomething in the Looks of all the Prifoners, befide those that are to be burnt, that is ghaftly and disconfolate, beyond what can be imagined; and in the Eyes and Countenance of those that are to be burnt, there is fomething that looks fierce and eager.

The Prifoners who are to be burnt alive, have befides a Familiar<sup>a</sup>, as all the reft have, a Jefuit on each Hand of them, who are continually preaching to them to abjure their Herefies: but if they offer any thing in defence of the Doctrines for which they are going to fuffer, they are immediately gagg'd, and not permitted to fpeak a Word more.

This I faw done to a Prifoner prefently after he came out of the Gates of the Inquifition; upon his looking up to the Sun, which he had not feen before of feveral Years, and crying out in a Rapture, How is it possible for People that behold that glorious Body, to worship any Being but him that created it !

<sup>a</sup> Familiars are properly the Serjeants and Bailiffs belonging to the Office, among whom are the greatest Noblemen in the Kingdom,

32

After the Prifoners came a Troop of a Familiars on Horfeback, and after them the Inquisitors and other Officers of the Court upon Mules; and last of all the Inquisitor General upon a white Horse led by two Men, with a black Hat and a green Hat-band, attended by all the Nobles that are not employed as Familiars in the Procession.

In the Terreiro de Paco, which is near the Inquifition, there is a Scaffold erected, which may hold two or three thousand People; at the one end fit the Inquifitors, and at the other the Prisoners, in the fame Order as they walked in the Proceffion; those that are to be burnt being feated on the highest Benches behind the rest, which may be ten Feet above the Floor of the Scaffold.

After fome Prayers, and a Sermon, (made up of Encomiums on the Inquifition, and Invectives againft Hereticks) a fecular Prieft afcends a Defk, which ftands near the middle of the Scaffold: who having first taken all the Abjurations of the Penitents, kneeling before him, one by one, at last recites the final Sentence upon those that are to be put to Death in the following Words:

We the Inquifitors of Heretical Pravity, having with the Concurrence of the most illustrious N. Lord Archbishop of Lisbon, called on the Name of the Lord Jesus Christ, and of his glorious Mother the Virgin Mary, and fitting on our Tribunal, and judging with the holy Gospels lying before us, that so our Judgments may be in the Sight of God, and our Eyes might behold what is just in all Matters; — have ordained that in this Place, and on this Day, you should receive + E your your definitive Sentence: We do therefore by this our Sentence define, pronounce, declare, and fentence thee, N. of the City of Lifbon, to be a convicted, confelfing, affirmative and profeffed Heretick, and to be delivered and left by us as fuch to the fecular Arm; and we, by this our Sentence, do caft thee out of the Ecclefiastical Court as an Heretick; and we do leave and deliver thee to the Power of the fecular Court; but at the fame time do most earnestly besech that Court, so to moderate its Sentence, as not to touch thy Blood, or to put thy Life in any Danger.

There is not in all Hiftory an Inflance of fo groß and confident a Mockery of God and the World, as this of the Inquifitors earneftly befeeching the Civil Magistrates not to put those Hereticks to death, whom they have condemned and delivered to them, in Coats painted over with Flames, for that Purpose; and which is performed in an Hour or two afterwards, without their shewing the least Displeasure to the Magistrates for disregarding their earnest Petition.

The Prifoners are no fooner in the Hands of the Civil Magistrate, than they are loaded with Chains before the Eyes of the Inquisitors; and being carried first to the secular Goals, are within an Hour or two brought from thence before the Lord Chief Justice; who, without knowing any thing of their particular Crimes, or of the Evidence against them, ass them, one by one, in what Religion they intend to die. If they answer, they will die in the Communion of the Roman Church; they are condemned to be carried forth-

forthwith to the Place of Execution, and there to be first ftrangled, and afterwards burnt to Ashes. But if they fay, they will die in the Protestant, or any other Faith contrary to the Roman; then they are fentenced to be carried forthwith to the Place of Execution, and there to be burnt alive.

At the Place of Execution, are fo many Stakes fet up as there are Prifoners to be burnt, with a good Quantity of dry Furz about them : The Stakes of the Profeffed, as the Inquifitors call them, are about four Yards high, and have a fmall Board, whereon the Prifoner is to be feated, within half a Yard of the Top; the Negative, and Relapsed, being first strangled and burnt, the Profeffed go up a Ladder between the two Jefuits that have attended them all the Day; and when they are come even with the forementioned Board, they turn about to the People, and the Jesuits spend near a quarter of an Hour in exhorting them to be reconciled to the Church of Rome ; which if they refuse to comply with, the Jesuits come down, and the Executioner afcends; and having turned the Profeffed off the Ladder upon the Seat, and chained their Bodies close to the Stake, he leaves them; when the Jesuits go up a fecond time, to renew their Exhortations, and at parting tell them, That they leave them to the Devil, who is standing at their Elbow to receive their Souls, and carry them with him into the Flames of Hell-fire, fo foon as they are out of their Bodies.

Upon this a great Shout is raifed; and as foon as the Jesuits are off the Ladders, the Cry is, Let the Dogs Beards be made; Which is done by thrufting flaming Furzes fasten'd to a long Pole, againft

against their Faces: And this Inhumanity is commonly continued till their Faces are burnt to a Coal, and is always accompanied with fuch loud Acclamations of Joy, as are not to be heard upon any other Occasion: A Bull-Feast, or a Farce, being dull Entertainments to the using a professed Heretic thus inhumanly.

The Beards of the Profeffed being thus made, or trim'd, as they call it in Jollity; Fire is fet to the Furzes, which are at the Bottom of the Stake, and above which they are chained fo high, that the Top of the Flame feldom reaches higher than the Seat they fit upon; and if there happen to be a Wind (to which the Place is much exposed) it feldom reaches so high as their Knees; fo that when there is a Calm, they are commonly dead in about half an hour after the Fire is kindled; but if the Weather prove windy, they are not dead in an hour and a half, or two hours, and fo are really roafted alive, and not burnt to Death. But though there cannot be a more lamentable Spectacle than this, the poor Sufferers all the while crying out, fo long as they are able to fpeak, Mercy, for the Love of God! yet it is beheld by People of both Sexes, and of all Ages, with fuch Transports of Joy and Satisfaction as are not on any other Occafion to be met with. And this is not owing to any natural Cruelty in the Difpolition of these People, but merely to the bad Spirit of their Religion ; for the violent Death of all other Malefactors, befides Hereticks, is no where more tenderly lamented than among the fame People,

rulling faming Parzes fallen'd to a long Pol

Within

36

Within a few Days after the Execution, the Pictures of all that have been burnt, and which were taken off their Breafts when they were brought to the Stake, are hung up in Saint *Domingo*'s Church; whofe Weft End, tho' very high, is all covered over with these Trophies of the Inquisition, hung up there in honour of Saint *Dominic*, who, to fulfil his Mother's Dream \*, became the first Inventor of that Court.

\* She dreamed, when ready to be brought to bed of him, that the was delivered, not of a human Creature, but of a fierce Dog with a burning Torch in his Mouth.

IN I S.

If to hear or read the Account of the late Earthquake at Lisbon fills our Minds with Horror and Amazement, how very dreadful must the actual Sight and Feeling of it have been to the Inhabitants of tflat great City ! But that they are greater Sinners than the reft of Mankind, and that this Judgment (as they effeom it) is come upon them on Account of the Inquilition there carried on against Jews and Herericks, as has been faid, I cannot believe ; it being (as I apprehend) inconfiftent with the Juffice and Goodnels of God to involve the English Merchants, their Wives, and Children, in the Punifhment of the Blood-thirity Inquifitors. In the Philosophical Transactions are many Hiftories of Earthquakes : There have been two at Oxford ; one in 1665, and another in 1683. Would it not be highly unjust to suppose that this City excecded Cambridge in Wickedneis, or any City where fuch a Phænon ena appear'd? The Earthquake in Sicily in the Year 1693 is, perhaps, exceeded by none, by the great Defolation it brought upon that Ifland. Of the magnificent City of Catania, the Seat of feveral of their Kings, and an University, there is not the least Foothep to be feen. Naturalifts differ as to the Caufe of Earthquakes; fome afcribe it to Air, others to Water, and fome to Fire ; and all with fome Appearance of Reafon, as may be feen by fuch as are curious in this Enquiry.

Evening port. 1796.

All I aim at is to perfuade People to be cautious in their Determinations concerning the Judgments of Almighty God; they thould not dare to be fo rath and prelumptuous with the New Teffament in their Hand, but read in Lake xiii, Chap. 4th 5th Verles. " Thofe " eighteen upon whom the Tower of Siloam fell and " flew thear; think ye that they were Sinners above all ", Mon that dwelt in Jerufalem, becaufe they fuffer'd " thefe Things ? I tell you, Nay, &c." Without doubt the eternal Mind can defiroy this little World of ours, and Ten Thousand Worlds, as it were instantaneously, by his Almighty Power ; but it thould be confider'd by rational Beings, that his Omniootence is always guided with infinite Wildom and attended by universal Goodneis, fo that it is impossible Earthquakes (however frightfal they appear to us) fhould be repugnant to the Nature of Things, or what we call the Attributes of the Divine Being, whole Ways, tho' past our finding our, are always for the best upon the Whole.
